USAGE

1.

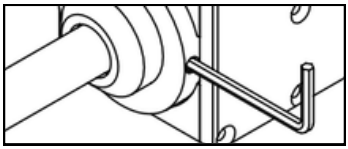

Attach it to the tripod.

Do not use too much force when attaching it to the tripod, as this will damage the gears inside.

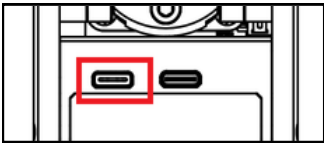

2.

To attach the Zenit Align Mini securely to the tripod, insert a hex key or screwdriver into the holes and use it to tighten the device.

3.

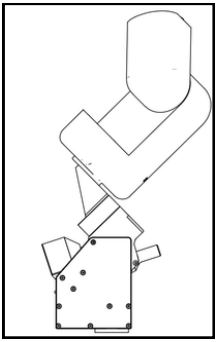

To power the device, use a USB-C PD power source that supports 12V.

4.

To attach your smart telescope to the Zenit Align Mini, use the included Vixen plate.

If you are using a star tracker or equatorial mount, make sure the polar axis points in the same direction as the camera.

6.

Polar alignment

To start the polar alignment, wait until the screen shows ready.

Then press the button and hold it after that.

Double-click to move through the menu, click once to start a process, and hold the button to confirm it.

Sometimes GPS takes longer to find your location, so we recommend entering the coordinates manually.

Connect to the Zenit Align Mini Wi-Fi and open 192.168.4.1 in your web browser. Go to Settings → Connections and enter your coordinates in the same format as Google Maps.

Do this only if you use the device for the first time, or if you have traveled at least 100km.
